

## EOL DATES ARE HARD TO FIND AND LACK TRANSPARENCY

It can be frustrating finding the date when your datacenter hardware will no longer be supported. Legally, the manufacturer must publish the EOL date for hardware as soon as it is determined by them.

Although the OEMs are required to post the announcement, it is not required to alert you and other users directly. It is your and your IT department's own responsibility to stay informed and regularly check the manufacturer websites for EOL and EOSL information.

When this information is announced, you should consider it as an indicator to begin planning for a change in procurement strategy or maintenance support. After EOL is called, EOSL can come months, or sometimes even years, later.

Once EOL is announced, you will no longer be able to buy that same hardware from the OEMs. Your OEM warranty will eventually expire, and if you decide to let the OEMs support and maintain your equipment, then your maintenance costs will increase significantly.

## EOSL MEANS END OF THE OEM LIFECYCLE- BUT YOU HAVE ALTERNATIVES

When the OEMs reveal the EOSL date, you are left with few options other than to support the hardware through alternative methods or to consider replacing your old equipment.

Before you determine which route to take, you should consider a TPM partner (Third Party Maintenance) to maintain and support your datacenter hardware.

TPM is hardware support for server, storage and network equipment and is an alternative to traditional OEM warranty and post-warranty support.

For example, you would enlist a TPM partner to support your IBM, HDS, HPE or Cisco equipment in your datacenter instead of OEM service.

The OEMs' main strategy is to renew existing hardware every third year, while the TPMs' strategy is to extend the lifecycle of the hardware as long as it makes sense, after it has gone out of OEM support.

## OEM VS. TPM

The illustration on the next page shows OEM support vs. TPM support comparing:

- Why the costs are different
- Coverage and service offers for OEMs and TPMs
- Flexibility and support
- Possibility of customization

## COSTS

### OEM

- Increasing costs
- New hardware sale over a maintenance contract
- High support costs can force you to invest in new datacenter hardware rather sooner than needed
- Reinstatement fee: Meaning customers have to pay for 12 months with retroactive effect on equipment on service

### TPM

- Significantly lower costs
- TPM providers' goal is to meet your need with custom solution for your needs
- Lower maintenance costs keep your datacenter equipment running well, even post-warranty
- No reinstatement fee: Meaning that the service contract becomes effective from the date that it is signed

## COVERAGE

### OEM

- One brand only - no flexibility
- OEM technicians support their own brand. Datacenters with more brands need more technicians
- Non-productive time is spent on determining who "owns" a problem rather than solving a problem, thereby extending downtime

### TPM

- Several vendor options for your datacenter
- TPM technicians apply expertise to a variety of OEM server, storage and network equipment, and not just a single brand
- Your issue is resolved – your TPM technician is your dedicated service provider, who knows your custom solution

## ADMINISTRATION

### OEM

- The OEMs' way is the only way
- OEM contracts tend to lock you into a narrow set of datacenter support options
- OEMs offer at least 12 months of binding period on service contracts

### TPM

- TPMs customize your datacenter support
- TPM agreements offer you flexibility and a wide range of datacenter support options
- TPMs offer down to one month binding period on service contracts

## EOSL LIST ON ALL MAJOR BRANDS

The following list serves to give a better overview of all major brands and models from January 2019 and beyond and to spot, when the equipment either goes or has gone EOSL.

If your equipment is on the list, you should consider your next step. If you have equipment in your datacenter that is not on the list feel free to contact us, as we support and maintain server, storage and networking equipment that has not gone EOSL as well.

## BROCADE EOSL
